

## What is Urbanisation?

This is an increase in the amount of people living in urban areas such as towns or cities. In 2007, the UN announced that for the first time, more than 50 % of the world's population live in urban areas.

### Where is Urbanisation happening?

Urbanisation is happening all over the world but in LICs and NEEs rates are much faster than HICs. This is mostly because of the rapid economic growth they are experiencing.

## Causes of Urbanisation

### Rural - urban migration (1)

The movement of people from rural to urban areas.

#### Push

- Natural disasters
- War and Conflict
- Mechanisation
  - Drought
- Lack of employment

#### Pull

- More Jobs
- Better education & healthcare
- Increased quality of life.
- Following family members.

### Natural Increase (2)

When the birth rate exceeds the death rate.

#### Increase in birth rate (BR)

- High percentage of population are child-bearing age which leads to high fertility rate.
- Lack of contraception or education about family planning.

#### Lower death rate (DR)

- Higher life expectancy due to better living conditions and diet.
- Improved medical facilities helps lower infant mortality rate.

## Types of Cities

### Megacity

An urban area with over 10 million people living there.

More than two thirds of current megacities are located in either NEEs (Brazil) and LICs (Nigeria). The amount of megacities are predicted to increase from 28 to 41 by 2030.

## Sustainable Urban Living

Sustainable urban living means being able to live in cities in ways that do not pollute the environment and using resources in ways that ensure future generations also can use them.

### Water Conservation

This is about reducing the amount of water used.

- Collecting rainwater for gardens and flushing toilets.
- Installing water meters and toilets that flush less water.
- Educating people on using less water.

### Energy Conservation

Using less fossil fuels can reduce the rate of climate change.

- Promoting renewable energy sources.
- Making homes more energy efficient.
- Encouraging people to use energy.

### Creating Green Space

Creating green spaces in urban areas can improve places for people who want to live there.

- Provide natural cooler areas for people to relax in.
- Encourages people to exercise.
- Reduces the risk of flooding from surface runoff.

### Waste Recycling

More recycling means fewer resources are used. Less waste reduces the amount that eventually goes to landfill.

- Collection of household waste.
- More local recycling facilities.
- Greater awareness of the benefits in recycling.

## Unit 2a

# Urban Issues & Challenges

## Sustainable Urban Living Example: Freiburg

### Background & Location

Freiburg is in west Germany. The city has a population of about 220,000. In 1970 it set the goal of focusing on social, economic and environmental sustainability.

### Sustainable Strategies

- The city's waste water allows for rainwater to be retained.
- The use of sustainable energy such as solar and wind is becoming more important.
- 40% of the city is forested with many open spaces for recreation, clean air and reducing flood risk.

## Integrated Transport System

This is the linking of different forms of public and private transport within a city and the surrounding area.

## Brownfield Site

Brownfield sites is an area of land or premises that has been previously used, but has subsequently become vacant, derelict or contaminated.

## Traffic Management

Urban areas are busy places with many people travelling by different modes of transport. This has caused urban areas to experience different traffic congestion that can lead to various problems.

### Environmental problems

- Traffic increases air pollution which releases greenhouse gases that is leading to climate change.

### Economic problems

- Congestion can make people late for work and business deliveries take longer. This can cause companies to lose money.

### Social Problems

- There is a greater risk of accidents and congestion is a cause of frustration. Traffic can also lead to health issues for pedestrians.

## Congestion Solutions

- Widen roads to allow more traffic to flow easily.
- Build ring roads and bypasses to keep through traffic out of city centres.
- Introduce park and ride schemes to reduce car use.
- Encourage car-sharing schemes in work places.
- Have public transport, cycle lanes & cycle hire schemes.
- Having congestion charges discourages drivers from entering the busy city centres.

## Traffic Management Example: Bristol

In 2012 Bristol was the most congested city in the UK. Now the city aims to develop its integrated transport system to encourage more people to use the public transport. The city has also invested in cycle routes and hiring schemes.

## Greenbelt Area

This is a zone of land surrounding a city where new building is strictly controlled to try to prevent cities growing too much and too fast.

## Urban Regeneration

The investment in the revival of old, urban areas by either improving what is there or clearing it away and rebuilding.

## Urban Change in a Major UK City: Sheffield Case Study

### Location and Background

Manchester is in the North West of England. It is located next to the M6, M60 and M1 motorways.

It is an industrial city with a history of cotton mills and a growing population of over 510,000.

### City's Importance

- Manchester is famous for football clubs like Manchester United and City.
- It played host to the commonwealth games in 2002.
- It has music venues like the Manchester Arena and is home to music acts like Oasis.
- It is the fifth largest city in the UK and has two major universities, an international airport.
- It is home to TV companies like the BBC.

### Migration to Manchester

During the industrial revolution, the population dramatically increased with people migrating from nearby rural communities.

With the attraction of working in the large cotton mills, international migrants from Ireland, the Caribbean, Pakistan and Bangladesh came to work in Manchester from 1900-1960.

More recently, refugees have arrived from Syria and Iraq. Also Manchester has attracted thousands of students from the UK & abroad.

### City's Opportunities

**SOCIAL:** Manchester has various cultural attractions such as the Palace theatre and the Science and Technology Museum. Shoppers are also drawn to the Trafford Centre's.

**ECONOMIC:** Retail contributes thousands of jobs as well as business and banking. Hospitality and entertainment is also continuing to grow in the city. Attracting young people in is causing the property market to boom.

**ENVIRONMENTAL:** Urban greening projects like Stevenson Square are increasing greenery in the city centre. Green transport projects like 'MoBikes' are also reducing air pollution.

### City Challenges

**SOCIAL:** Manchester Central has 47% of children living in poverty. Life expectancy varies by 16 years within the city and regeneration is forcing people out of areas which they can no longer afford to live in.

**ECONOMIC:** The closure of cotton mills caused widespread unemployment, followed in later years by the closure of the docks. Parts of Oldham still have below average achievement for GCSE grades in the UK.

**ENVIRONMENTAL:** Urban sprawl has led to increased pressure and decline of greenfield sites around the city.

### Manchester Regeneration

**Salford Quays** is the old Manchester Dock area which had undergone a massive decline by the 1980s. Developers aimed to regenerate the area by improving the visual appeal and creating jobs.

Rebranding the area and funding from both public and private areas allowed rebuilding of bridges, links via Metro to the city centre, improved water quality and aimed to create 10,000 jobs.

The BBC relocated its headquarters from London into an area now known as 'Media City'.

## Urban Change in a Major NEE City: RIO DE JANEIRO Case Study

### Location and Background

Rio is a coastal city situated in the South East region of Brazil within the continent of South America. It is the second most populated city in the country (6.5 million) after Sao Paulo.

### City's Importance

- Has the second largest GDP in Brazil. It is headquarters to many of Brazil's main companies, particularly with Oil and Gas.
- Sugar Loaf mountain is world heritage site.
- One of the most visited places in the Southern Hemisphere.
- Hosted the 2014 World Cup and 2016 Summer Olympics.
- Christ the Redeemer is a new 7 wonder.

### Migration to Rio De Janeiro

The city began when Portuguese settlers with slaves arrived in 1502. Since then, Rio has become home to various ethnic groups.

However, more recently, millions of people have migrated from rural areas that have suffered from drought, lack of services and unemployment to Rio. People do this to search for a better quality of life.

This expanding population has resulted in the rapid urbanisation of Rio de Janeiro.

### City's Opportunities

**Social:** Standards of living are gradually improving. The Rio Carnival is an important cultural event for traditional dancing and music.

**Economic:** Rio has one of the highest incomes per person in the country. The city has various types of employment including oil, retail and manufacturing.

**Environmental:** The hosting of the major sporting events encouraged more investment in sewage works and public transport systems.

### City Challenges

**Social:** There is a severe shortage of housing, schools and healthcare centres available. Large scale social inequality, is creating tensions between the rich and poor.

**Economic:** The rise of informal jobs with low pay and no tax contributions. There is high employment in shanty towns called Favelas.

**Environmental:** Shanty towns called Favelas are established around the city, typically on unfavourable land, such as hills.

### Self-help schemes - Rocinha, Bairro Project

- The authorities have provided basic materials to improve people's homes with safe electricity and sewage pipes.
- Government has demolished houses and created new estates.
- Community policing has been established, along with a tougher stance on gangs with military backed police.
- Greater investment in new road and rail network to reduce pollution and increase connections between rich and poor areas.
